## CONTENTS

Preface ..... iii

### Part I: *WHAT CAN LATTICES DO FOR YOU?*

by Garrett Birkhoff

Introduction .....	1
Boolean logic .....	2
Dedekind's work .....	4
Lattice theory begins .....	6
Lattices and groups .....	7
Universal algebra .....	9
Geometric lattices .....	12
Continuous geometries. ....	14
Lattices and set theory .....	19
Current trends in set theory .....	21
Convergence in lattices .....	24
Lattice-ordered monoids .....	27
Lattice-ordered groups. ....	29
Vector lattices .....	31
Directed vector spaces .....	34
Positive linear operators .....	36
Time-dependent case .....	37
Bibliography .....	39

Part II: *THE CURRENT INTEREST IN ORTHOMODULAR  
LATTICES*

by Samuel S. Holland, Jr.

Introduction .....	41
The origin of orthomodular lattice theory .....	46
Some basic orthomodular lattice theory .....	79
The principal results .....	95
Some brief remarks on quantum mechanics .....	114
Bibliography .....	117

Part III: *GEOMETRIC LATTICES*

by Henry Crapo and Gian-Carlo Rota

Introduction .....	127
Geometries and Geometric Lattices .....	132
Classical Examples .....	141
Span, bases, minors, and dependence .....	150
The extension theorem .....	153
The critical problem .....	161
Bibliography .....	167

Part IV: *UNIVERSAL ALGEBRA*

by George Grätzer

Introduction .....	173
Basic concepts .....	175
From the Homomorphism theorem to the Jordan-Hölder theorem .....	176
Algebraic constructions .....	178
Related structures .....	181
Free algebras and identities .....	185
Bases of free algebras .....	188

The first order language of algebras .....	193
Free $\Sigma$ -algebras .....	199
Some general comments and lattice-theoretic particulars .....	202
Appendix .....	211
